I N T R O D U C T I O N

The high cost of conventional non-renewable sources of energy has led to increasing attention being paid to alternative sources of energy. Amongst these, solar energy has generated considerable interest due to its inherent advantages. Sri Lanka has an abundance of solar energy, yet, its uses are limited to agriculture and salt production. The high price of fuels and the interest shown in the utilisation of solar energy by other countries has had its desired effects in Sri Lanka too for it has led to a number of research workers undertaking studies in this field. In such circumstances, the compilation of a Bibliography of literature on Solar Energy, available in Sri Lanka is relevant and useful.

Research is being carried out at the CISIR on a solar still and a dryer; at the Engineering Faculty, Peradeniya and at the Mechanical Engineering Department, Katubedde Campus on various other applications, ranging from a solar pond to a solar refrigerator. The selection of a village in the Hambantota District-Pattiyapola -as Asia's First Rural Energy Centre has not only spotlighted Sri Lanka in relation to the application of solar energy, but also engendered greater interest in this subject locally. This project is sponsored by the United Nations Environment Programme and aims to promote the use of renewable energy sources in the villages of developing countries.

SCOPE: The intention of this bibliography is to provide a ready guide to the literature available on solar energy research. The entries are limited mainly to the publications of the following libraries - CISIR; IDB; NSC. It is regretted that comprehensive coverage including the information sources of other libraries, such as the Engineering Faculty Library, Peradeniya, has not been possible.

Entries are for books, periodical articles, reports, pamphlets, and unpublished material.

ARRANGEMENT : A special scheme had to be devised as it was not possible to fit the material into any of the classification schemes already in existence. The arrangement consists mainly of three divisions:

- i. General
- ii. Science of Solar Energy
- iii. Methods of Utilization

The arrangement within the third group ranges from simple application of solar energy to more sophisticated technology.

Entries are serially numbered and listed only once. Within the sections and sub-sections, the entries are arranged alphabetically by author. Attempt has been made as far as possible to give complete/bibliographic details, but in the case of many reprints, it was not possible to trace the original source. An annotation is given at the end of most entries. An author index with names arranged alphabetically is included at the end of the Bibliography. Location/s of the bibliographical source/s is/are indicated at the end of each entry. Entries for which details were taken solely from library catalogues are indicated with an Asterisk (*).

Abbreviations used :

Ceylon Institute for Scientific and Industrial Research - CISIR
 Industrial Development Board - IDB
 National Science Council - NSC

In the case of publications belonging to individuals, the addresses have been included in the acknowledgements.

Since the completion of the work on the Bibliography, a Seminar Report on "Sun-drying Methodology" has been published by the NSC.

The 9 Commonwealth Science Council Conference held in Colombo in Nov/Dec 1976 devoted one Seminar Session to "Alternative Energy Resources and their Potential in Rural Development". The seminar papers and country reports relating to this session are also available at the NSC Library.

This Bibliography is the First of the "SLSTIC Bibliography Series". We hope that its shortcomings will not inhibit it from its primary purpose - the dissemination of information.

S. Jayasuriya

ACKNOWLEDGEMENTS:

I should like to acknowledge the ready assistance and cooperation extended to me by

- the Librarian and Staff of CISIR and IDB;
- Mr DBJ Ranatunge of National Engineering Research & Development (NERD);
- Mr IM de Silva of 20/3, Tichborne Road, Colombo 10;
- Mr N Anbalagar, Scientific Officer, National Science Council;
- Dr SAK Abayawardena of the Pilot Plant and Designs Section, CISIR,
(presently attached to Lever Brothers)
- Mrs I Unamboowe, Acting Librarian, National Science Council
and
- Mr KDS Siriwardena for secretarial assistance.

I GENERAL

1. ABAYAWARDANA, S.A.K.
Utilisation of solar energy.
8p.
A paper presented at the Mini-Session on "Energy" held by Section E of the Sri Lanka Association for the Advancement of Science, 4 September 1976. Provides background information on the nature of solar energy and problems of utilisation and considers the various applications that can be made.
NSC
2. ARCHER, M.
** Solar energy from chemistry.
Electrical Engineer 51(11), 1974. p.20-22.
Discusses the conversion of the sun's radiant energy into forms useful to man.
CISIR
3. AUSTRALIA. CSIRO. Engineering Section. Annual Report, 1960-
A section is devoted to discussing research conducted on solar stills, solar absorbers, solar distillation, solar heating, etc.
CISIR
4. BEGISHEV, V.
Harnessing the sun in the service of man. Invention Intelligence July/Aug 1974. p.269-270.
IDB
5. BEHRAM, D.
Something new under the sun. Invention Intelligence July/Aug 1974. p.248-249.
IDB
6. BEHRMAN, D.
Solar energy claims a new place in the sun. Unesco Courier January, 1974. p.24-26, 40.
Describes how on every continent, domestic heating and lighting units, water pumps, desalting stills, refrigerators, are running on solar energy.
NSC
7. BEHRMAN, D.
The solar revolution.
4p. reprint.
Discusses how changes in society as revolutionary as those wrought by the advent of steam or electricity could well be in store if the sun becomes a major source of energy.
Research papers presented at the International Congress on "The sun in the service of mankind" are discussed. (held in Paris, 2-6 July, 1973).
CISIR
8. BHATTACHARYYA, P.
Solar energy: a soft look. Chemical Age of India 26(5), 1975. p.353-355.
Indicates that although solar energy is characterised by its low power density, the total power available from this energy source is substantial. Adds that it has very wide application not only in the field of daily domestic usage but also in industry and agriculture.
CISIR
9. BHIDE, V.G.
Pathways to solar energy utilization. Invention Intelligence July/Aug 1974. p.255-268.
IDB

- 2
10. BRANLEY, F.M.
Solar energy. London: Edmund Ward, 1957/ 107p. illus.
CISIR
 11. BRINKWORTH, B.J.
Solar energy. p.431-448.
(In Aspects of energy conversion, ed. by I.M. Blair and others; Oxford: Pergamon Press, 1976. xvii, 847p.)
Takes a look at the nature and characteristics of this source of energy and of known means of exploiting it and discusses its merits in comparison with other sources of energy.
Solar energy and its uses are also discussed briefly in various parts of the book.
NSC
 12. COMMONWEALTH ECONOMIC COMMITTEE.
Sources of energy: a review. London: HMSO, 1966. viii, 185p.
Solar power is discussed on p.184-185. A review of consumption, resources, production, trade, stocks and prices, relating to coal and lignite, petroleum, natural gas and hydro-electricity, and to nuclear power and other new sources of energy.
CISIR
 13. CRANSTON, A.
A bright future for solar energy. National Parks & Conservation 48(10) 1974. p.10-13.
Points out that all life depends for its existence on the light of the sun and therefore we must look to this great benefactor as a source of plentiful and clean energy. Discusses the various ways in which solar energy could be applied.
Mr. IM de Silva
 14. DANIELS, F.
Direct use of the sun's energy. New York: Ballantine, 1964. xvi, 271p.
The different ways in which solar energy could be utilized are discussed.
Mr. DBJ Ranatunge (NERD)
 15. DANIELS, F.
** Direct use of the sun's energy. American Scientist 55(1), 1967. p.15-47.
Deals with the many aspects of utilization of solar energy.
CISIR
 16. DE SILVA, I.M.
Solar energy. Loris 13(4), 1974. p.193-197.
Discusses the traditional methods of utilization.
NSC
 17. DOTTO, L.
The sun also rises over Canada: why can't it heat our homes. Science Forum 8(4), 1975, p.16-17.
Reports the discussions of the 1st meeting of the Solar Energy Society of Canada; it covered wind and biomass energy as well.
NSC
 18. GLASER, P.E.
Power from the sun. Unesco Courier January, 1974, p.16-21.
Indicates the potential for the future.
NSC
 19. HALACY, D.S.
Fabulous fireball: the story of solar energy. New York: Macmillan, 1957. 154p.;illus.
CISIR
 20. HOTTEL, H.C.
Solar energy. Chemical Engineering Progress 71(7), 1975. p.53-65.
The energy derived from wood, coal, etc. is ultimately derived from sunlight. The author goes on to discuss the problem of how to make efficient use of the sun's energy directly without having to wait until it is processed into the conventional forms.
IDB

Power from the sun. Nature 260, (8551), 1976. p.477.
NSC
28. LARSEN, E.
A history of invention. London: Phoenix House, 1961. 382p.
Chapter 5 deals with "Direct energy from the sun"- discusses the various methods in which solar energy could be utilized.
Mr. IM de Silva
29. LEACH, G.
Energy futures - wide open to change and choice. Ambio 5(3), 1976.p.108-116.
Sharply reduced energy growth rates in developed countries; greatly increased rates in the poor countries; a major switch from fossil fuel dependence to renewable energy resources (especially forms of solar energy): these are possibilities that could become realities, informs, the author.
NSC
30. LUSTIG, H.
Our dwindling energy resources. Unesco Courier January, 1974. p. 4-13.
Presents a global energy "balance sheet" from which it becomes clear that our present problems and future requirements call for the speediest possible development of power sources such as solar energy.
NSC
31. MORSE, R.N.
Solar energy as a major primary energy source. Proc. Symp. Realistic Prospects for Solar Power in Australia, Melbourne, 22 Nov. 1972.
Sp. reprint
Organised by the Australian and New Zealand Section of the International Solar Energy Society - it discusses how solar energy is capable of supplying 25% of Australia's primary energy by the year 2000. Points out that solar energy can make an immediate and increasingly important contribution to industrial and household heating requirements.
CISIR

- 32. OORT, A.H.
The energy cycle of the earth. Scientific American 223(3), 1970. p.54-63.
The solar energy absorbed by the earth is eventually reradiated into space as heat, Meanwhile it is distributed over the surface of the earth by the circulation of the atmosphere and the oceans.
Mr. IM de Silva
- 33. ORLOV, V.
Hunting the sun in the steppes of Central Asia. Unesco Courier January, 1974.p.33-36.
Describes some of the solar devices which are being built in the USSR.
NSC
- 34. Planning a municipal energy future. Mosaic 6(4), 1975. p.24-29.
With the development of natural gas shortages in Colorado springs, the community saw its problems as an opportunity to use results of solar energy research to some practical tests.
NSC

INTERNATIONAL STUDIES

67. DE WINTER, F.

Description of the solar energy R & D programs in many nations. /n.p./: Energy Research & Development Administration, 1976. iv, 294p.

Final report based in part on presentations and on a Panel Discussion held on July 28 1975 during the conference of the International Solar Energy Society at UCLA. Report includes descriptions of the solar energy R & D programs and national plans of 32 countries, of the organization of American States, and of a number of private organizations. Many of the programs include references and addresses. Solar energy research in Sri Lanka is discussed on p.173-178.

NSC

LESS DEVELOPED COUNTRIES

68. An overview of alternative energy sources for LDCS: a report to US Agency for International Development, Technical Assistance Bureau, Office of Science and Technology. /n.p./: Arthur D Little, 1974. ii, (various paging).

Presents an overview of alternative energy sources of types which could be of significant value to LDCS in adjusting to the impact of sharply higher world market prices of petroleum.

Chapter 1 includes a section on solar energy. Chapter 3 which provides profiles of selected LDCS concentrates on the economics and energy. Includes an account of Sri Lanka.

CISIR

69. The prospects and limitation of solar energy utilization in the developing countries. Science & Industry 5(3), 1967.p.360.

**

CISIR

70. SAIF-UL-REHMAN, M.

Prospects and limitations of solar energy utilization in developing countries. Proc. Solar Energy Conference, Boston, 20-23 March, 1966.

The effects of prospective uses of direct solar energy for power production, saline-water distillation, refrigeration and air-conditioning, water heating, crop drying, etc. on the prosperity of the developing countries are discussed.

CISIR

71. U.S.A. National Academy of Sciences

Solar energy in developing countries: perspectives and prospects. Washington: The Academy, 1972. 49p.

Considers the present state of development of processes for utilization and application of solar energy. Also considers the desirability of establishing an International solar energy Institute in North Africa.

(A report of an Ad hoc Advisory Panel of the Board on S & T for International Development)

CISIR

NSC

TROPICS

72. MORSE, R.N.

Solar energy as an aid to the development of the tropics. Proc. Sixth World Power Conference, Melbourne, 20-27 Oct, 1962.

19p. (report no. 119 iii 7/2)

Points out some ways in which the plentiful supply of solar energy can be utilized in the development of the tropics.

CISIR

UNESCO

73. GLITSCH, R.E.

Unesco and the changing attitude toward solar energy. Unesco Courier January, 1974. p. 14-15.

Discusses proposals being studied by Unesco in the context of an eventual programme that would open up new possibilities for international cooperation in solar energy and its applications.

Vol. V : Electrical processes.

CISIR

95. SOLAR ENERGY: the journal of solar energy science and technology. Oxford : Pergman Press.
Vol. 1, 1957 --
Official journal of the International Solar Energy Society. Includes technical and scientific contributions dealing with the varied aspects of solar energy and its application.

CISIR

96. READ, W.R.
Realistic prospects for the utilization of solar energy in Australia. Proc. Federal Conference of the Australian Inst. of Refrigeration, Air Conditioning, Heating, Brisbane, 29 April -3d May, 1974.
13p.reprint.
Solar water heating for domestic and industrial use is discussed in detail, and reference is made to the possible use of solar energy for processes, such as drying, space heating and steam generation. Use of solar cells for special applications is also discussed. Emphasis is also given to the use of solar energy in plant growth and its products.

CISIR

97. Solar energy utilization. 10p. reprint.
Discusses solar and thermal radiation properties of materials; solar distillation; solar air heaters; utilization of waste heat in solar stills; solar measurements programme.

CISIR

98. UN CONFERENCE ON NEW SOURCES OF ENERGY: Solar energy, wind and geothermal power, Rome, 21-31 Aug, 1961.
Proceedings. New York :UN, 1964. Vol. 6 Contains papers and reports relating to use of solar energy for cooling purposes; use of solar energy for production of fresh water; use of solar energy for high temperature processing. (solar furnaces).

2.2 SOLAR RADIATION

99. APPAPILLAI, V.
Solar variations in the horizontal component of the earth's magnetic field at Colombo. Proc. Sri Lanka Association for the Advancement of Science, 24-26 Nov. 1960, p.37-38.
Magnetic records obtained with an Askania H-magnetograph during the period April, 1959 to March, 1960 in the physical laboratories of the University of Ceylon, Colombo, have been analysed harmonically for solar variations. A comparison is made of these results with the results of other magnetic observatories situated near the equator.

NSC

100. BAHCALL, J.N.
Solar neutrinos : a scientific puzzle. Science 191(4224), 1976. p.264-267.
Discusses how during the past 15 years scientists have tried to understand and test the theory of how the sun produces its radiant energy.
NSC
101. DUNKLE, R.V.
Flow distribution in solar absorber banks.
6p. reprint.
A theoretical analysis of the flow distribution is presented in this paper and recommendations proposed for large installations. Some temperature measurements on an experimental system are also presented.
CISIR
102. Is it the sun, and not spray cans, that is reducing the Ozone. Science Forum 8(4), 1975. p.26-27.
A 2% decrease in Ozone between 1970-74 in the atmosphere over the USA and Gt. Britain has been reported. It is suggested that the reduction may be due to solar activity and not from the introduction of manmade fluorocarbons and nitrogen oxides.
NSC
103. KOBERG, G.E.
Methods to compute long-wave radiation from the atmosphere and reflected solar radiation from a water surface. Washington: Dept. of the Interior, 1964. 136p. (Geological Survey Professional paper 272-F)
The received and reflected radiation measurements have been used in this study of the relation of long-wave radiation to certain atmospheric characteristics such as temperature, vapour pressure, and cloud cover.

IDB
114. Down on the solar farm. Unesco Courier January, 1974. p.21.
Describes the solar power farm with land covered by sunshine collectors instead of crops.
NSC
115. FREE, J.R.
Solar cells. Popular Science December, 1974. p.52-55, 120-121.
Describes how new technology can bring solar cells down to earth for big-scale power systems.
IDB
116. GRETZ, J.
The conversion of solar energy without concentration. Energia Nucleare 21 (8/9), 1974.p.504-510.
Various possible ways and techniques of solar energy conversion (thermal, photochemical, biochemical) except those based on concentration are described and discussed. Economic calculations relevant to some applications are given.
CISIR
117. JAIN, V.K.
A new thin solar cell with totally reflecting back mirror. Phys Stat Sol 30, 1975. p.69-72.
Discusses how by using a totally reflecting back mirror the power weight ratio can be improved significantly, the conversion efficiency, the radiation resistance and the overall performance of the cell both for space and terrestrial applications.
CISIR

118. MORSE, R.N.

Flat plate solar absorbers: the effect on incident radiation of inclination and orientation. Melbourne: CSIRO Engineering Section, 1958. 11p.;16 graphs. (Report E.D.6).

The influence of inclination and orientation of the receiving surface on the amount of incident solar radiation is examined. Information for designers of absorber installations is given in the form of curves showing insolation through-out the year for a series of surfaces at different angles of inclination and varying in orientation.

CISIR

119. New charge for re-chargeable solar battery. New Scientist 70(1004), 1976.p.579.

Reports on the use of electro-chemical cells for directly converting sunlight to electricity, a result of work done by research workers at MIT.

NSC

120. CHUBB, T.A.

Design and cost study for a steam-methane solchem power plant for tropical areas. Washington: Naval Research Laboratory, 1975. 49p.(Feb. 1975 Working Draft).

This study provides an outline design for a solchem solar energy power plant suitable for use in low latitude areas.

CISIR - Dr Abeywardene.

121. New energy system. Australian Science Newsletter 3(5), 1976. p.5.

Describes a new solar energy system for domestic and industrial heating and cooling, proposed by Australian researchers.

NSC

122. OLSEN, H.L.

Preliminary considerations for the selection of a working medium for the solar sea power plant. Proc. Solar Sea Power Plant Conference, 1973.p.185-204.

Discusses some of the effects of choice of working medium on the estimated size and cost of a 100 Mw solar sea power plant.

CISIR

123. ORIANI, R.A.

Metallurgical aspects of substrates for thin-film systems in solar energy conversion. Proc. Symp. Mater Sci Aspects Thin film Syst Sol Energy Conversion, 1974. p.250-266.

Considers the characteristics of the material to be used as the substrates for thin films for solar energy conversion that will affect the useful life and performance of the assembly.

CISIR

124. SEETHARAMAN, V.

Materials for the direct conversion of solar energy. Trans Indian Institute of Metals 28(2), 1975. p.102-115.

The development of direct conversion of solar energy into electricity requires materials with reproducible properties at reasonable prices. The authors discuss the different aspects of the materials requirements and the possible routes for the production of some of these materials. Includes a brief outline of the scope of research in developing new type of materials.

CISIR

125. SLESSER, M.

Solar energy breeders. Nature 262(5566), 1976.p.244-245.

Offers an opinion on a largely ignored aspect of solar energy, i.e., the potential for solar energy devices to breed energy.

NSC

137. A new solar still developed.
** Far East Trade & Development 22 (March) 1967.p.257.

Developed by CSIRO-averages 544 gallons per day at a cost of £A 2 a 1000 gallons.

CISIR

138. PORTEOUS, A.
The theory, practice and economics of solar distillation. Chemical Engineer 255, November 1971. p.406-411.

The principles and construction of solar distillation plants are discussed. An analytical model is developed which portrays the heat and mass transfer processes within the still. The influence of various parameters on output is investigated and the results compared from several solar still installations. An economic analysis is performed which places the fresh water costs from this method of desalination in perspective with those of conventional distillation processes. It is shown that installations with capacities up to 38m³/day (10,000 U.K. gal/day) can be viable with other more complicated distillation processes.

CISIR

- 139 PROCTOR, D.
Effect of adding waste heat to a solar still. Proc. International Solar Energy Society Conference, Melbourne, 2-6 March, 1970.

6p. reprint.

Discusses with an example, of how outputs from the Hightt experimental waste heat still shows that adding waste heat to a solar still is a feasible proposition.

CISIR

146. HOLLANDS, K.G.T.
A concentrator for thin-film solar cells. Proc. International Solar Energy Society Conference, Melbourne, 2-6 March 1970.
7p. reprint.
Presents a theoretical study of a concentrating reflector suited to thin-film solar cells.
CISIR
147. JACOBI, W.I.
Use of flexible reflective surfaces for solar energy concentration. J. Vac Sci Technol 12(1), 1975. p.169-173.
Devices for measuring the bi-directional reflectance-distribution function is described and data presented. A discussion of membrane-reflector development and data from life tests are presented.
CISIR
148. KHANNA, M.L.
Plane-glass mirror solar energy concentrators for concentrating sugarcane and palm juices. J. of Science and Industrial Research 18 A, May, 1959. p.212-217.
The design, construction and working details of a plane-glass mirror (9in. sq.) solar energy concentrator is described. The results of experiments on the evaporation of water and cane juice, using reflectors with overall dimensions of 3 x 3 ft and 6 x 3 are presented. The advantages of this type of collector over the conventional concentrators, such as low cost, simplicity of handling, etc., has been assessed.
CISIR

3.1.3 DESALINATION

149. DELYANNIS, A.A.

Solar desalting. Chemical Engineering 77, Oct. 1970. p.136-140.

Indicates that solar distillation exhibits a considerable economic advantage over other salt-water distillation processes because of its use of free energy and its insignificant operating costs.

CISIR

150. KHANNA, M.L.

Solar water distillation in North India. J. of Sci. & Ind. Res. 21 A, Sept, 1962.p.429-433, reprint.

Indicates that of the various methods suggested or experimentally tried for the demineralization of saline or sea water, those based on the use of solar energy are obviously the most economical, since no fuel is consumed. Adds that, since Northern India has bright sunshine for most part of the year, there is considerable scope for the utilization of solar energy for the demineralization of saline water. Presents a summary of the results obtained at the National Physical Laboratory. The economics of installation and operation of distillation units are also briefly discussed.

A solar energy method for reducing coffee-drying costs.

J. of Ag. of the Univ. of Puerto Rico 47(4). 1963. p.226-235.

(reprint).

Describes how a solar heat collector could be utilized to provide heated air for drying coffee. Indicates that significant reductions could thus be achieved in processing costs.

CISIR

190. SZULMAYER, W.

From sun-drying to solar dehydration, 1: methods and equipment. Food Technology in Australia 23(9) 1971.p.440-443.

Surveys methods of solar drying having varying levels of technological sophistication and compares the thermodynamics of conventional dehydration with those of solar drying. Solar dehydration - a process combining solar drying with temperature control and regulation of air flow - is proposed as a step towards improving the quality of sun-dried products and increasing the efficiency of the drying process.

191. SZULMAYER, W.

From sun-drying to solar dehydration, 2: solar drying in Australia. Food Technology in Australia. 23(10), 1971.p.434-501.

An extensive literature survey located only one attempt to investigate solar drying of fruits in Australia. Examines the inadequate use of solar drying technology in a technologically advanced country in the sub-tropical belt.

CISIR

192. SZULMAYER, W.

Thermodynamics of sun-drying. 10p. reprint.

Argues that sun-drying has some thermodynamic advantages when compared with artificial dehydration, because radiant heat maintains higher product temperatures and vapour pressures than does ambient air, and, thermal losses associated with heat transfer in artificial dehydration (heater-air-product) are avoided. But adds that there are less obvious drawbacks.
