ACKNOWLEDGEMENT

The S & T Indicators Unit of NSF wishes to express its gratitude to all the Directors and Heads of Departments of Research Institutions and Deans and Heads of the Departments of Universities for the assistance provided to the Unit to collect the relevant information. The Unit also wishes to thank the Technical Staff members of all the relevant organizations, which responded, for the co-operation extended to the Unit by sending these information

The Unit wishes to express its gratitude to the Chairman and the Director of NSF for the encouragement and co-operation extended to the Unit, to compile this directory successfully.

Finally the Unit is indebted to Ms. Dilani Suriyaarachchi and Ms. Dilhani Jayakody, for their untiring efforts in data entry, word processing, editing and finalizing the contents for publication this directory.

Funds provided by the SAREC is gratefully acknowledged.

PREFACE

The skills structure of technical officers/technicians is an important aspect in the development of science and technology in a country. However, until recently this aspect had received only little attention of the planners and policy makers although it did concern research managers very much. On the other hand there is a demand for skilled technicians not only from within the country but also from abroad. In order to review and study the existing situation, the National Science Foundation(NSF) conducted a survey to collect information on skills of technicians available in research institutions and the universities.

The Directory of Technical Officers in Sri Lanka has been prepared from the data collected under a survey of scientific and technical personnel conducted during 1998/99. This data covered biographic as well as technical specialization and capabilities of the technical staff in research institutions and universities of Sri Lanka. Seventeen research institutes and ten universities have responded in this survey, although responses from engineering faculties were very poor.

UNESCO defines technicians and equivalent staff as persons whose main tasks require technical knowledge and experience in one or more fields of engineering, physical and life sciences or social sciences. They participate in R & D by performing scientific and technical tasks involving the application of concepts and operational methods, normally under supervision of researchers. In Sri Lanka however, different institutes have their own strategies to categorize their scientific and technical personnel. Experimental officers, agricultural instructors, technical assistants as well as laboratory and field assistants are considered as technical officers or equivalent staff by some institutes. Sometimes the designation research assistant is also given to this category of staff. Because of this situation the NSF study deviated from the UNESCO definition and relied on the grading system followed by the local institutes in undertaking this survey.

The data is presented in a format which gives the basic information such as name, sex, qualifications, affiliated institute or department, area of technical expertise, as well as the type of equipment/instrument that the person can operate/maintain and repair. In most cases the highest qualification obtained by the person has been indicated, but in a few instances both technical qualifications as well as the academic qualifications are reported.

Almost all the information provided by the respondents were included in the two indexes, ie, Technical Specialties index and Equipment index, without major editing.

A preliminary analysis of the technical officers database gives useful information on the academic and technical skills structure, as well as the scope of professional training in operation, repair and maintenance of scientific equipment among this cadre of technical staff. This review will be a useful input for policy analysts, and hence will be published as a technical paper in the near future.

Last year the S and T Indicators Unit of NSF published a Directory of Scientific Instruments in Sri Lanka from the data collected under a parallel survey. This data covered a set of information on scientific equipment available in research laboratories of R & D institutes and universities, and hence complements the findings of the study on technical officers. The S & T Indicators Unit plans to prepare an integrated study of the two sets of information, which it is hoped will provide a useful insight to the technology capacities/capabilities and gaps in research laboratories in Sri Lanka.

Finally, the Unit which undertook this study would welcome constructive comments and criticism on this work in order to be able to refine and streamline future studies of this type.
